CAREER INFO-TECH

Computer Training & Professional Courses

LEARN TODAY • BUILD YOUR TOMORROW

Complete course syllabus and learning roadmap

A practical guide to the computer, programming, accounting, office-application, typing and digital-service courses offered by Career Info-Tech. The topics below are a suggested curriculum outline and can be adapted to the learner's level and batch.

Programming C / C++ • Java
Database SQL
Web Development HTML & CSS
Diploma Programs DCA • PGDCA
Accounting & Business Tally Prime • ERP
Typing & Exam Preparation Hindi / English Typing • CPCT
Digital Services Online Work • MS Office & Internet

Training approach: Concepts • Live demonstrations • Guided practice • Assignments • Mini-projects • Revision

Detailed Course Contents

The following module-wise outlines describe the major topics learners can expect to study. The trainer may adjust depth, sequence and practical assignments according to the course level.

1. C Programming & C++

Overview: Build programming fundamentals, logical thinking and problem-solving skills using C and object-oriented C++.

Course contents / modules:

• Computer programming basics, algorithms, flowcharts and pseudocode

• C language structure, tokens, variables, constants and data types

• Operators, expressions, input/output and type conversion

• Conditional statements, loops, nested loops and pattern programs

• Arrays, strings and user-defined functions

• Pointers, pointer arithmetic and dynamic memory basics

• Structures, unions, enumerations and file handling

• C++ introduction, classes, objects, constructors and destructors

• Encapsulation, inheritance, polymorphism and abstraction

• Function/operator overloading, templates and exception handling

• Basic STL concepts: vector, string, map and algorithms

Practical work: Create calculator, marksheet, number/pattern programs, record-management and small console projects.

Learning outcome: Write structured programs and understand core procedural and object-oriented concepts.

2. Java Programming

Overview: Learn Java syntax and object-oriented programming with practical console and application exercises.

Course contents / modules:

• JDK, JRE, JVM, installation and first Java program

• Variables, primitive data types, operators and type casting

• Decision-making, loops, arrays and strings

• Methods, parameter passing, recursion and packages

• Classes, objects, constructors, this and static

• Inheritance, interfaces, abstraction and polymorphism

• Access modifiers, encapsulation and object relationships

• Exception handling and custom exceptions

• Collections: List, Set, Map and iteration

• File input/output and basic serialization concepts

• Introduction to JDBC and connecting Java with a database

• Debugging, clean code and basic project structure

Practical work: Build a student record system, billing utility or library-management console application.

Learning outcome: Develop a foundation for Java application development and database-connected projects.

3. SQL & Database Management

Overview: Understand relational databases and retrieve, organise and update information using SQL.

Course contents / modules:

• Database concepts, tables, rows, columns, schemas and data types

• Relational database concepts, primary keys and foreign keys

• CREATE, ALTER, DROP and TRUNCATE

• INSERT, UPDATE, DELETE and SELECT

• WHERE, ORDER BY, DISTINCT, aliases and filtering operators

• Aggregate functions, GROUP BY and HAVING

• Joins: INNER, LEFT, RIGHT and CROSS JOIN

• Subqueries, nested queries and set operations

• Constraints, indexes and views

• Transactions and COMMIT / ROLLBACK concepts

• Normalization basics and database design

• Backup, restore and safe query practices

Practical work: Create a sample student or shop database and write reports using joins, grouping and subqueries.

Learning outcome: Write SQL queries to create, manage and analyse relational data.

4. HTML & CSS – Web Design

Overview: Create structured, attractive and responsive web pages using HTML and CSS.

Course contents / modules:

• How websites work: browsers, servers, URLs and web-page structure

• HTML document structure, headings, paragraphs, links and images

• Lists, tables, forms, inputs, labels and buttons

• Semantic HTML elements and accessibility basics

• CSS syntax, selectors, cascade, inheritance and specificity

• Colours, backgrounds, typography, borders and spacing

• Box model, display, positioning and overflow

• Flexbox and CSS Grid layouts

• Responsive design, media queries and mobile-first layouts

• Navigation bars, cards, buttons and page sections

• Embedding video, icons and external resources

• Basic browser testing and publishing a static website

Practical work: Design a personal profile page, institute landing page, course listing and contact form layout.

Learning outcome: Build and style responsive multi-section websites.

5. DCA – Diploma in Computer Applications

Overview: A foundation-level programme covering everyday computer use, office productivity and internet skills.

Course contents / modules:

• Computer fundamentals, hardware, software and operating systems

• Windows desktop, files, folders, settings and shortcuts

• Keyboard and mouse skills, file management and printing

• MS Word: formatting, tables, page setup, headers and mail merge basics

• MS Excel: formulas, functions, sorting, filtering and charts

• MS PowerPoint: slides, themes, layouts and presentations

• Internet browsing, search skills, downloads and online safety

• Email creation, attachments, folders and professional email etiquette

• PDF creation, scanning, printing and document handling

• Basic computer terminology and practical lab exercises

Practical work: Prepare letters, formatted reports, spreadsheets, presentations and email attachments.

Learning outcome: Use a computer confidently for study, office and day-to-day digital tasks.

6. PGDCA – Post Graduate Diploma in Computer Applications

Overview: An advanced computer-applications pathway combining office tools, programming, databases and practical projects.

Course contents / modules:

• Computer architecture, operating-system concepts and software fundamentals

• Advanced MS Office: Word, Excel, PowerPoint and productivity workflows

• Programming fundamentals and problem-solving using a selected language

• Object-oriented programming concepts

• Database management, relational design and SQL queries

• Web fundamentals: HTML, CSS and introductory scripting concepts

• Networking basics, internet protocols and cyber-safety awareness

• Software-development life cycle and project documentation

• Data handling, reports and presentation of information

• Practical project planning, testing and documentation

Practical work: Complete an integrated project such as an institute, inventory, student or office-record management system.

Learning outcome: Develop broader computer-application knowledge and practical project experience.

7. Tally Prime – Accounting with GST

Overview: Learn computerised accounting workflows and business records using Tally Prime.

Course contents / modules:

• Accounting fundamentals: transactions, debit, credit and accounting principles

• Company creation, financial year and configuration

• Groups, ledgers, vouchers and opening balances

• Payment, receipt, contra, journal and sales/purchase vouchers

• Inventory masters, stock groups, units and godowns

• Purchase, sales, returns, discounts and stock tracking

• GST concepts, tax ledgers and GST configuration

• GST sales/purchase entries and tax invoice basics

• Day book, ledger, trial balance, profit and loss and balance sheet

• Bank reconciliation and outstanding reports

• Payroll introduction and employee records

• Data backup, restore, export and print options

Practical work: Enter sample business transactions, maintain stock and generate accounting and GST-related reports.

Learning outcome: Perform common bookkeeping and business-accounting tasks in Tally Prime.

8. ERP – Enterprise Resource Planning

Overview: Understand how organisations use integrated systems to manage business operations and information.

Course contents / modules:

• ERP purpose, modules and end-to-end business processes

• Organisation structure, users, roles and access permissions

• Master data: customers, vendors, products and services

• Procurement: purchase requests, purchase orders and goods receipt

• Inventory: stock movement, warehouse and material tracking

• Sales: quotations, orders, delivery and invoicing concepts

• Finance: accounts payable, receivable and general-ledger concepts

• HR and payroll process overview

• Workflow approvals, audit trails and operational reports

• Data accuracy, controls and basic ERP implementation lifecycle

Practical work: Map a sample purchase-to-payment and order-to-cash workflow using demonstrations or a training ERP environment.

Learning outcome: Understand integrated business processes and the role of ERP systems.

9. English & Hindi Typing

Overview: Improve keyboard familiarity, typing speed and accuracy for office work and computer-based examinations.

Course contents / modules:

• Keyboard layout, finger placement and correct sitting posture

• Home-row practice and touch-typing technique

• English letter combinations, words, sentences and paragraphs

• Capital letters, punctuation, numbers and symbols

• Hindi typing layout and input-method introduction

• Hindi character practice, words, sentences and paragraphs

• Speed-building drills with accuracy checks

• Timed passages, mock tests and progress tracking

• Common typing errors and methods to reduce mistakes

• Document typing, editing and formatting practice

Practical work: Regular timed typing tests in English and Hindi with speed and accuracy review.

Learning outcome: Build consistent typing technique; target speed depends on practice and the relevant test requirements.

10. CPCT – Computer Proficiency & Certification Test Preparation

Overview: Prepare for computer-proficiency assessment areas through structured practice. The latest official exam pattern should always be checked before a test.

Course contents / modules:

• Computer fundamentals, hardware, software and operating systems

• Windows operations, file management and common shortcuts

• Word-processing concepts and document formatting

• Spreadsheet concepts, formulas, functions and data handling

• Presentation software and slide operations

• Internet, browser use, email and digital communication

• Computer networks and basic cyber safety

• General computer awareness and terminology

• English and Hindi typing practice, as applicable

• Objective-question practice, mock tests and time management

Practical work: Attempt topic-wise quizzes, full-length practice tests and timed typing exercises.

Learning outcome: Strengthen computer awareness and exam readiness. This course does not itself guarantee a CPCT result or certificate.

11. Online Work & Digital Services

Overview: Develop practical skills for common online form, document and digital-service tasks. Actual services depend on current rules and authorised access.

Course contents / modules:

• Computer and internet readiness, browser settings and safe browsing

• Creating, organising and sharing digital documents

• Online forms: reading instructions, entering data and uploading files

• Scanning, resizing, naming and converting documents to PDF

• Email communication, attachments and application follow-up

• Online appointment, registration and application workflows

• Using official portals and verifying website authenticity

• Digital payments: safety principles and transaction awareness

• Data entry, spreadsheet updates and document preparation

• Customer communication, privacy and responsible handling of personal data

• Recognising scams, fake links and unauthorised service requests

Practical work: Practise sample forms and document workflows using dummy data and authorised training environments.

Learning outcome: Handle routine digital tasks carefully while protecting personal and financial information.

Additional Skill Modules

12. MS Office – Word, Excel & PowerPoint

Overview: Build productivity skills for school, college, office and business administration.

Course contents / modules:

• Word: document creation, formatting, tables, page layout, references and mail merge basics

• Excel: cell references, formulas, IF, SUM, AVERAGE, COUNT and lookup concepts

• Excel: sorting, filtering, conditional formatting, charts and data validation

• PowerPoint: slide layouts, themes, images, charts, transitions and presentation delivery

• File formats, printing, PDF export and collaboration basics

Practical work: Create a formal letter, monthly expense sheet, marksheet and business presentation.

Learning outcome: Prepare common office documents and reports independently.

13. Internet, Email & Digital Literacy

Overview: Use internet services confidently, communicate professionally and protect information online.

Course contents / modules:

• Browser basics, search techniques and evaluating information

• Email setup, composing, replying, forwarding and attachments

• Cloud storage, file sharing and document collaboration concepts

• Video meetings and online communication etiquette

• Passwords, multi-factor authentication, privacy and phishing awareness

• Downloading, uploading, printing and PDF handling

Practical work: Send a professional email, organise files and complete a sample online workflow.

Learning outcome: Use common internet and communication tools safely.

14. Data Entry & Documentation

Overview: Improve accuracy and speed while preparing, checking and maintaining digital records.

Course contents / modules:

• Data-entry standards, field types and validation

• Spreadsheet entry, formatting, sorting and filtering

• Copying data carefully and checking for duplicates

• Document formatting, templates and file naming

• PDF conversion, scanning and document organisation

• Quality checks, confidentiality and backup practices

Practical work: Prepare a sample customer list, inventory sheet and formatted office document.

Learning outcome: Maintain clear, accurate and well-organised digital records.

15. PDF, Image & Document Handling

Overview: Learn everyday document-preparation tasks used in offices and online applications.

Course contents / modules:

• Create, combine, split and organise PDF files using appropriate tools

• Convert documents to and from PDF where supported

• Scan documents and adjust orientation and readability

• Resize and crop images while preserving legibility

• Rename, compress and organise files for uploads

• Check file size, format and page order before submission

Practical work: Prepare a clean sample document set for an online application using dummy information.

Learning outcome: Prepare files in commonly requested digital formats.

Suggested Learning Method

• Start with the learner's current skill level and course objective.

• Demonstrate each concept, then let learners practise it independently.

• Use short assignments and practical tasks after every major module.

• Review mistakes and revisit topics that need more practice.

• Finish with a practical task or mock assessment appropriate to the course.

Important information

Course duration, fees, batch timings, software versions, eligibility and assessment/certificate arrangements should be confirmed directly with Career Info-Tech. Course outlines are indicative and may be customised. Any external examination, government service, licence, certificate, job or internship is subject to the relevant organisation's rules and availability. Do not share passwords, OTPs or sensitive documents with unauthorised persons.
